

Why in the world would anyone want to restrict traffic and weather available to satellite radio subscribers?

Both of these provide a valuable service to ANYONE who is on or about to get on the road and travel to a destination. The local channels do not provide nearly the same accurate, up to the minute coverage available through the satellite radio subscribers. The net result of having this information at hand is safer, more reliable traveling. WHAT IS WRONG WITH THIS?

I find it absurd that the FCC should try to regulate the type of programming a paying consumer is entitled too, particularly when it is a harmless and useful product. I STRONGLY urge the FCC to reject the NAB's petition 04-160. Perhaps the FCC should be paying more attention to more important and relevant issues.
